

C2 17. (Twice Amended) The electroluminescent device according to claim 15, the thin-film layer including at least one material selected from the group consisting of a fluoride or an oxide of an alkali metal, a fluoride or an oxide of an alkaline earth metal, and a fluoride or an oxide of a group III element in the periodic table.

C3 19. (Twice Amended) The electroluminescent device according to claim 15, the thin-film layer being disposed only between the anode and the light-emitting layer.

C4 28. (Twice Amended) An electroluminescent device, comprising:  
a bank defining a plurality of pixels;  
a plurality of anodes, each of the anodes being provided for each of the plurality of pixels;  
a plurality of light-emitting layers, each of the light emitting layers being provided in each of the plurality of pixels and the above each of the plurality of anodes and including at least an organic polymer ;  
a thin-film layer commonly provided on the plurality of light-emitting layers for suppressing current flowing through the plurality of light-emitting layers and not contributing to light emission; and  
a cathode provided on the thin-film layer.

C5 30. (Twice Amended) The electroluminescent device according to claim 28, the thin-film layer including at least one material selected from the group consisting of a fluoride or an oxide of an alkali metal, a fluoride or an oxide of an alkaline earth metal, and a fluoride or an oxide of a group III element in the periodic table.

31. (Twice Amended) The electroluminescent device according to claim 29, the thin-film layer including at least one material selected from the group consisting of a fluoride or an oxide of an alkali metal, a fluoride or an oxide of an alkaline earth metal, and a fluoride or an oxide of a group III element in the periodic table.
